

TETRASTIGMA, A NEW FRUITING VINE FROM MANILA, *TETRASTIGMA HARMANDI* PLANCHON, S. P. I.  
No. 34630.

This vine has made a remarkable growth at the Davie Experimental Farm on the Everglades, where it was first planted out July 9, 1914. It is described by Mr. C. F. Baker as a tall-growing woody vine which becomes loaded with fruit of the size and appearance of the Scuppernong grape and which is edible, making a very good refresco. It flowered in 1915, but did not fruit and seems to have been unaffected by the floods produced by 17 inches of rain which fell in less than three days. Photographed (P20010FS) by David Fairchild, February 6, 1916.
